

A PLATFORM FOR NATIONAL ICOPE PROGRAMMES

Your country's ICOPE programme, *ready to run.*

Capacia is the platform under a national ICOPE programme: five modules that run in your country, on your system. Assess puts ICOPE's two steps on the older person's own device; Insight turns results into follow-up; Studio keeps the clinical content with your clinicians; Learn trains the people who help; Collaborate, with founding partners, reaches a service that answers.

Live, not a prototype.

Running today as ICOPE Québec, in French and English, presented by Schouela CEDurable, a PAHO/WHO Collaborating Centre.

Step 1 and Step 2 in one sitting.

In France's Occitanie rollout, fewer than 1 in 10 positive screens ever reached Step 2.¹ In Assess, ICOPE's targeted, self-administered Step 2 follows at once, on the same device.

Your country, your system, your rules.

Deployed in your cloud, fitted to your law, in your languages. You own the data.

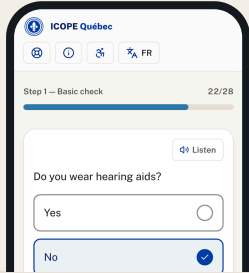

Mahdi Imani, PhD · mahdi.imani@mail.mcgill.ca · [linkedin.com/in/mahdi-imani](https://www.linkedin.com/in/mahdi-imani)

¹ Tavassoli N et al., *Lancet Healthy Longevity* 2022;3:e394-404.

Five modules on one engine.

Start with what you need and add the rest under one contract. Four modules run today in Québec; Collaborate is being built with founding partners.

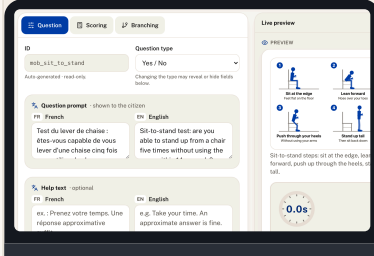

Assess

The citizen's check

ICOPE's Step 1 and a targeted Step 2 on any phone, tablet or computer. A personal report, reminders and re-checks. Large type, read-aloud, caregiver mode.

LIVE IN QUÉBEC

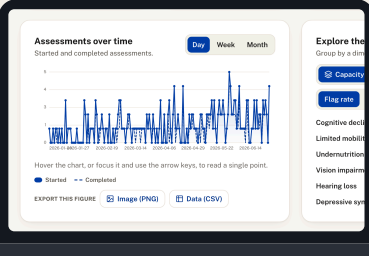

Studio

Your clinical content

Clinicians edit questions, scores and reports in each language, with a live preview. A validator flags unsafe changes before anything is published.

LIVE IN QUÉBEC

Insight

The programme's view

Reach, drop-off and Step 2 outcomes by region. A follow-up worklist with alerts, de-identified exports and a meeting deck.

LIVE IN QUÉBEC

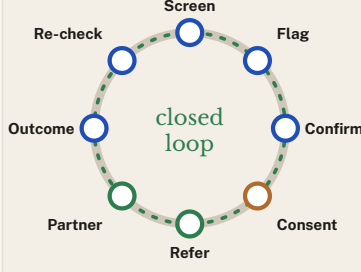

Learn

Training and certificates

One course today, for ambassadors and volunteers; more by pack. Quizzes, a server-graded exam and certificates anyone can verify.

LIVE IN QUÉBEC

Collaborate

The loop, closed

Consented referrals to partner services, a local service directory, and outcomes followed from flag to care.

FOUNDING PARTNERS

Clinical content is data. Questions, thresholds and reports change without a code release, and every answer carries the version that scored it.

Private by design. Identity is kept apart from the research record, and every staff access to it is logged.

Deterministic. The same answers give the same result on every device.

Any language. French and English today; yours arrive through a country pack.

One programme is live. This is what it shows.

ICOPE Québec has run since August 2026 at icopequebec.ca, in French and English. The card is Québec’s country fit; yours gets the same card, filled in for your law.

Canada, Québec

ICOPE Québec

Live since August 2026

 DATA LAW

Québec’s Law 25: identity kept apart from research data; care and research consents taken separately

in force

 DEVICE STATUS

Health Canada’s medical-device rules: read as patient self-screening, not a device; the written determination is in progress

in progress

 HOSTING

Montréal cloud region (ca-central-1); data and backups in Canada

in Canada

 ACCESSIBILITY

Built to WCAG 2.2 AA, measured screen by screen up to 175% text size

measured

 INSTRUMENT

WHO Step 1 and a targeted Step 2, in French and English

published

 NEXT STEPS

Canada’s 988 crisis line; every flag names a next step (your family doctor, or Québec’s GAP without one)

in place

Centre collaborateur OPS/OMS pour des solutions de santé durables pour les personnes âgées

What Step 2 at home does with a flag

1 in 3 flags confirmed

Of 164 Step 1 flags taken to Step 2 at home, 57 were confirmed. 85 needed no new referral: 32 were cleared by the in-depth test and 53 were already in care. 17 declined the test and 5 were due a follow-up. ICOPE Québec live data, September 2026.

automated tests

In your country, on your system, under your rules.

A package is only useful if it is lawful and running where your citizens live. Fitting the app to your market is our work, done with local counsel before you sign: the country fit dossier.

	FOR PILOTS ☁ Hosted	THE DEFAULT 🔑 Your cloud	ON REQUEST 🏛 Sovereign
WHERE IT RUNS	Our cloud account, in a region your law accepts	Your cloud account (Supabase or AWS) and your domain	Your government cloud or data centre, as containers
DATA AND KEYS	Ours, as your processor, under a data-processing agreement	Yours. Keys you hold; we are not a processor	Yours entirely
UPGRADES	We roll them out	Signed bundles, applied by us with a token you issue, or by your IT from the runbook	By the implementation partner, from signed bundles
OUR ROLE	Processor of health data	Software vendor	Software vendor
SUPPORT ACCESS	Full: it is our stack	A time-boxed, audited support role you switch on, or none	None; the partner is on site
FITS	Pilots, small cities, Learn alone	Ministries, regions, health systems; anywhere with residency or sovereignty rules	National programmes with a hosting mandate
WHAT YOU PAY	Licence and a hosting fee	Licence, a one-time deployment, yearly maintenance; you pay the cloud bill	Licence and the partner's services

We do, for the app

- ✓ Medical-device status for your market
- ✓ Privacy-law mapping; consent and notice texts drafted
- ✓ Instrument licence records (MoCA, MNA-SF)
- ✓ All of it refreshed every year
- ✓ Data residency and a certified host where required
- ✓ Accessibility conformance report
- ✓ Security whitepaper and impact-assessment template

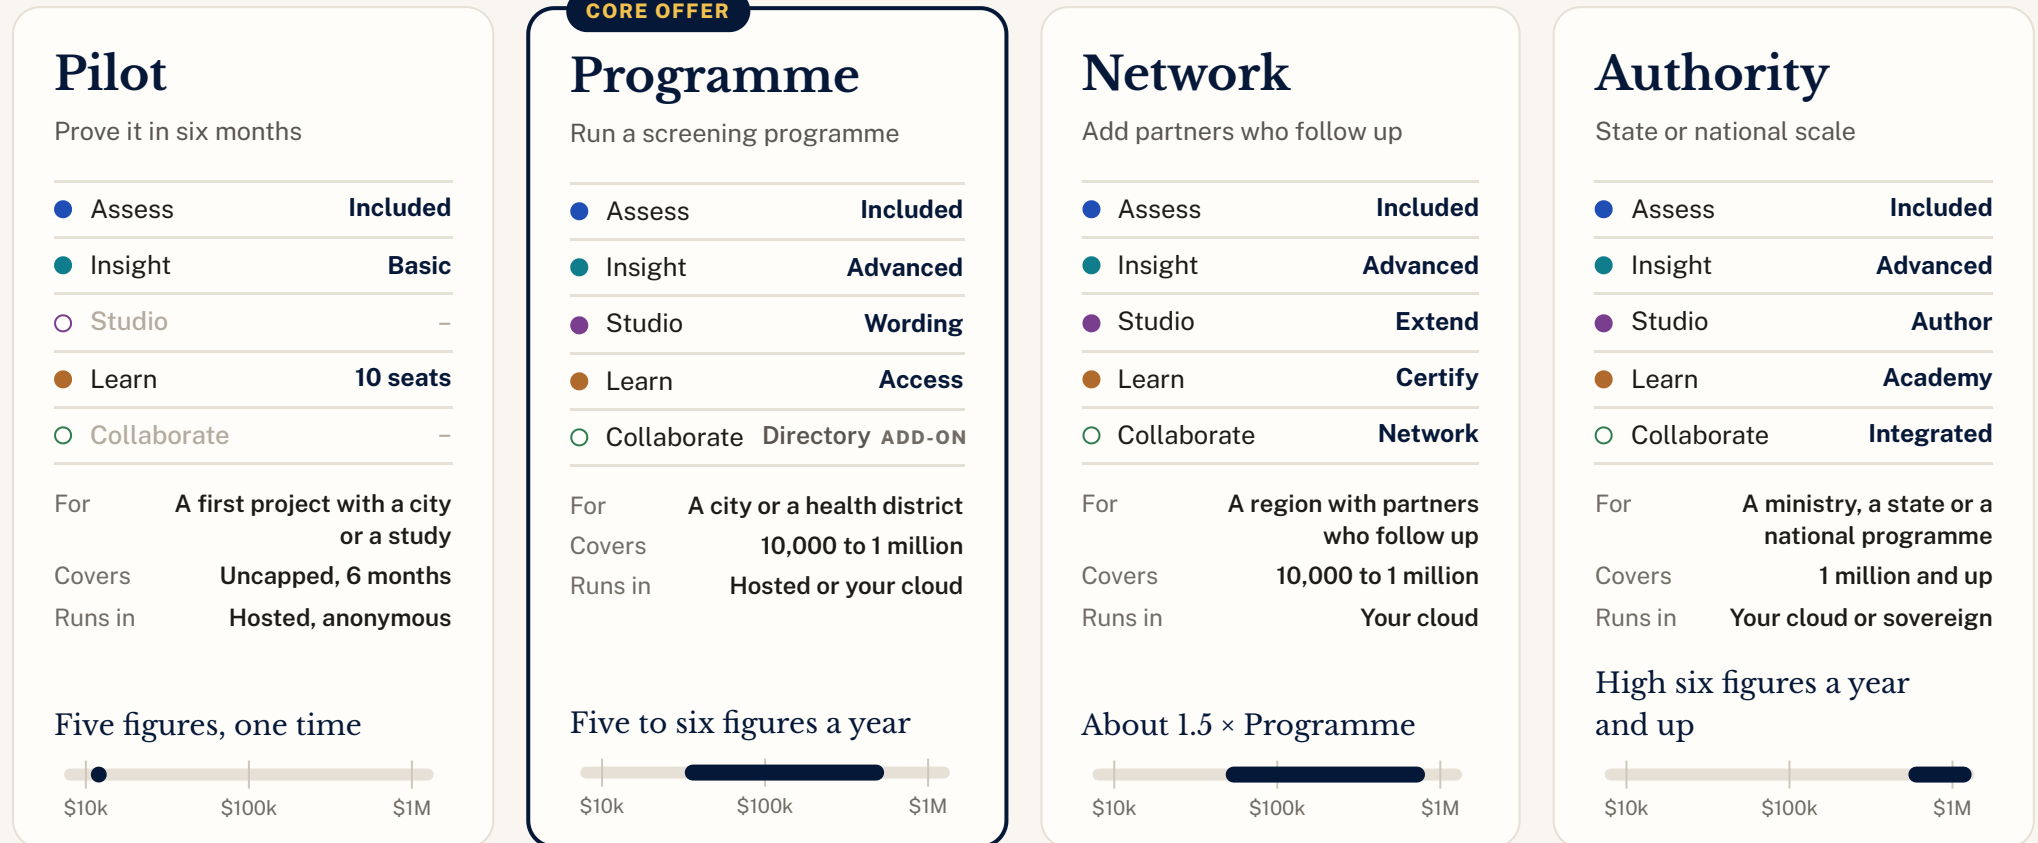

You do, for the programme

- Data controller of record
- Your counsel approves the texts
- Ethics approval for research use
- Procurement and the contract set
- Clinical sign-off of the instrument
- The cloud account and a technical contact
- Services and crisis lines that answer

Start with a pilot. Grow under one contract.

Four packages, or modules à la carte. Licences scale with the older people covered each year, and returning people are free.

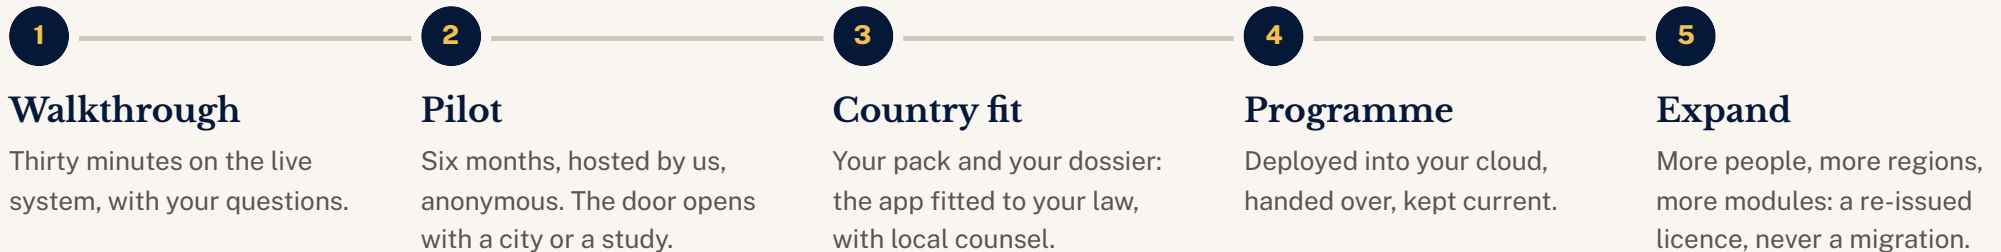

What the tier words mean. A hollow dot marks Collaborate, being built with founding partners: priced now, switched on when it ships.

- Insight **Basic** shows reach, drop-off and outcomes; **Advanced** adds the follow-up worklist with alerts and change over time.
- Studio **Wording** edits your texts; **Extend** adds local questions; **Author** adapts the instrument, signed by your clinical authority.
- Learn **Access** gives the courses and quizzes; **Certify** adds the exam, certificates and cohorts; **Academy** adds your own courses.
- Collaborate **Directory** will be services near you; **Network** adds consented referrals to partners; **Integrated** adds FHIR export to your records.

Under CAD 2 a year per older person covered from 50,000 people, about CAD 10 per person actually screened: a fraction of one nurse-led screening visit. A licence run in your cloud carries a 1.3 × multiplier; a one-time set-up covers the pack, the fit

dossier and deployment. Founding-partner terms for the first programme in each country. Indicative ranges in CAD, not an offer.

Five steps from a conversation to a programme.

Let's talk about *your* programme.

THE PEOPLE BEHIND IT

Gustavo Duque, MD, PhD, FRACP, FGSA

Director, Schouela CEDurable. Professor of Medicine and Director of the Division of Geriatric Medicine, McGill University.

Centre collaborateur OPS/OMS pour des solutions de santé durables pour les personnes âgées

ICOPE (Integrated Care for Older People) is a framework of the World Health Organization. Capacia is independent software built to implement it; it is not a WHO product and implies no endorsement by WHO. ICOPE Québec is presented by Schouela CEDurable, the Centre of Excellence for Sustainable Health of Seniors Simone and Edouard Schouela, Montréal, a PAHO/WHO Collaborating Centre for Sustainable Health Solutions for Older People; the designation is the centre's. Screens are from ICOPE Québec; photographs are illustrative.
